

Amazon Marketplace Web Service Consulting

Development support to help vendors build and integrate applications to sell products on Amazon via Marketplace Web Service (MWS)

Amazon Marketplace Web Service (Amazon MWS) is an integrated library of APIs that allow Amazon sellers to expand their business by automating key sales activities such as listings, orders, payments, fulfillment, and reports. The APIs supported by MWS offer more capability than any previously available to Amazon sellers. By tapping into Amazon's vast online ecosystem, vendors can broaden their reach, lower their cost of sales, accelerate response time to customers, and improve their bottom line.

However, the code of the Amazon Marketplace Web Service APIs has been described as labyrinthine. Over a dozen APIs are available including Feeds, Fulfillment Inbound Shipment, Fulfillment Outbound Shipment, Fulfillment Inventory, Merchant Fulfillment, Orders, Products, Finances, Reports, and Push Notifications Schemas. Time spent mastering technical details equates to increased development costs and lost sales. Progent offers the expertise of seasoned consultants to work with your development team and provide programming, workflow integration, project management support, and mentoring to help you shorten the development cycle and get to market quickly.

Progent's consulting support for Amazon Marketplace Web Service can help you:

- Build applications for your Amazon seller account
- Integrate your ERP system, database platform and web sales sites with Amazon MWS
- Align listing, order and payment data with your existing workflows
- Integrate Fulfillment by Amazon (FBA) capabilities into your web sites
- Automate inventory, order and report management
- Work with Java, C#, or PHP development environments
- Quickly learn the intricacies of MWS APIs
- Use the Amazon MWS REST-like interface
- Create robust client apps to handle future changes in MWS reports and response elements
- Plan and manage your development projects
- Set up test environments and troubleshoot software design and code

The Progent Advantage

For more than 15 years, Progent has helped businesses of all sizes to create, enhance or troubleshoot mission-critical applications. Progent offers the scope of expertise to resolve development problems that involve disciplines besides coding such as network infrastructure, ERP software, database management, disaster recovery, or security and compliance issues. Progent is committed to knowledge transfer through ad hoc mentoring, formal training for teams or individuals, and thorough documentation of application solutions. Progent does not deliver black-box systems that lock you into one consultant's services but instead helps you create and maintain documented solutions based on leading practices.

Integration Support for Amazon Web Services (AWS)

If you are moving all or part of your IT infrastructure to Amazon's AWS cloud services, Progent can help you with every facet of your migration including planning and implementation, setting up hybrid strategies for legacy technology, centralized management, pilot testing, backup/recovery, and security.
