

ProSight Network Audit Services

A fast and affordable way for small and mid-size businesses to get an objective evaluation of the health of their information network

Progent's *ProSight Network Audits* offer small and mid-size businesses an unbiased assessment of the health of their network infrastructure, computers, devices, and applications. Powered by leading remote monitoring and management (RMM) platforms, and overseen by Progent's world-class IT experts, *ProSight Network Audits* help you understand how the deployment of your core network assets conform to industry best practices. Both the Basic and Advanced versions of *ProSight Network Audit* services are available at a low, one-time cost and deliver immediate benefits such as a cleaner, safer Active Directory environment. Both versions also come with a year of remote monitoring. Benefits can include lower cost of management, better compliance with data security standards, higher utilization of IT resources, faster troubleshooting, more reliable backup/recovery, improved network performance and increased uptime.

Progent's ProSight Network Audit Basic

ProSight Network Audit Basic reports on essential server and PC information and can optionally provide details on other network attached devices. This low-cost audit includes a year of remote monitoring based on Progent's *ProSight WAN Watch* RMM platform. Within 10 days from the start of the audit, Progent will provide you with all details and reports collected by *ProSight WAN Watch*. These deliverables include the Active Directory (AD) Health Check document completed by a Progent Microsoft consultant. The AD Health Check report identifies errors and misconfigurations and recommends remediation.

Progent's ProSight Network Audit Advanced

ProSight Network Audit Advanced provides all items included in *ProSight Network Audit Basic* plus a deep-dive, based on *ProSight LAN Watch* remote monitoring, into information about your Microsoft-powered servers and workstations. *ProSight Network Audit Advanced* includes one full year of network monitoring based on *ProSight LAN Watch*, and customers have access to the rich selection of documents and reports created by *ProSight LAN Watch*.

Active Directory (AD) Health Check

An unhealthy AD and related services can lead to serious problems including network outages, delays in authentication or access to file and print services, data loss, bottlenecks to disaster recovery, security vulnerabilities, and poor Internet performance. The Active Directory Health Check includes the installation of *ProSight WAN Watch* discovery tools plus automated network scans and a manual health check. Key discovery areas and processes include:

- Existing DC roles and placement and physical site layout
- IP layout and DHCP
- Existing hardware and software inventory
- Verify NTFRS/DFSR and group policy replication/configuration
- Verify AD replication
- Verify DNS/domain/forest zones
- Identify stale/lingering objects
- Security assessment
- Forest/Domain functional levels

BASIC FEATURES

- Essential server and PC info collected by the *ProSight WAN Watch* RMM platform
- One year of remote monitoring via *ProSight WAN Watch*
- Active Directory Health Check with suggestions for fixes
- 10-day turnaround from the start of the audit
- Low one-time cost covers audit and one year of monitoring

ADVANCED FEATURES

- All features included with the *ProSight Network Audit Basic* service
- Detailed information about Microsoft-powered servers and workstations
- Access to the extensive report library of *ProSight LAN Watch*
- One year of remote monitoring via *ProSight LAN Watch*

BENEFITS

- Active Directory Health Check can eliminate unused or stale accounts to improve security and compliance, simplify IT management, and enhance network performance
- Extensive reporting help you understand how to increase the business value of your information network
- ProSight remote monitoring with automatic asset updates speeds up troubleshooting and lowers IT management costs
- Improve disaster recovery by continually verifying the health of backup/restore components
- Ultra-affordable introduction to state-of-the-art IT management solutions
